Bernard Deltour mainly specializes in environmental law, in which he is considered one of Belgium's leading practitioners. He is particularly recognized for his extensive experience with waste and soil pollution issues. Bernard has vast experience in transactional, litigious as well as administrative practices, at European and Belgian federal and regional levels. Thanks to his perfect fluency in both Dutch and French, he acts in cases in Belgium's three regions. He also has a full professional proficiency in English.

The vast majority of Bernard's clients are private companies and trade associations. He is particularly familiar with waste management utilities and the chemical, pharmaceutical, energy and distribution industries.

He holds a law degree from the University of Leuven (KU Leuven) and has been a member of the Brussels Bar since 1988.

He also gained experience as a member of the personal staff of a regional minister.

Bernard Deltour is constantly involved in supporting policy development as well as legislative and regulatory projects, based on a comparative law approach and seeking to facilitate the implementation of widely acceptable, practically workable and efficiently enforceable provisions of environmental law.

Due to his vast experience, he has been called to chair the board of TRACIMAT VZW, a non-profit organization which will deal with the identification, qualitative certification and tracing of demolition waste in Belgium's Flemish Region and to the management committee of SOLTRACING SAS, a French company commercializing a method for the identification, qualitative certification and tracing of excavated soils in France.

His international work is based on a vast network of highly regarded specialists across the globe in the EU, North and South America, Africa, Asia and Australia.

PRACTICE AREAS

- Regulatory (Environment; Energy)

LANGUAGES

French, Dutch, English

RECENT MATTERS

- Assisting the Belgian Federal Authority on identifying and dealing with barriers to the development of the “Circular Economy”, through a consortium of consultants
- Assisting a leading global environmental utility in disposing of most of its Belgian waste management activities
- Assisting professional organizations in promoting the enactment of new regulatory provisions aiming at facilitating the implementation of a circular economy and industrial symbiosis
- Assisting leading global industrial operators in selling (former) production sites
- Assisting a BRIC-investor in developing a new petrochemical operation in Belgium’s Flemish Region
- Assisting a number of utilities across a variety of industry sectors in securing their “licences to operate”, either through legal lobbying support work or by representing them in administrative and contentious procedures
- Teaming up with international law firms on pan-European reviews of nationally applicable product regulations
- Assisting international clients and corresponding law-firms on auditing the compliance of local operations and negotiating specific contractual provisions in M&A-contracts
